

# Adani Transmission arm lays 897-km line in UP

## OUR BUREAU

New Delhi, December 20

Ghatampur Transmission, a subsidiary of Adani Transmission, has completed construction of one of India's longest intra-State transmission lines of 897 circuit km, the company said on Monday. This will enhance operational efficiency of Uttar Pradesh's power system network and benefit Kanpur, Agra, Greater Noida, and Hapur.

### 35 years of runway ahead

The transmission line comprises four 765KV and 400KV bay extensions at Agra, Greater Noida and Hapur. The project has been developed under public-private partnership (PPP) mode on a Build, Own, Operate and Maintain (BOOM) basis, and will provide transmission services to Long-Term Transmission Customers (LTC) with 35 years of runway ahead, ATL said in a statement.

“Completion of this large

project even during the pandemic is a significant achievement. This project will improve reliability, operational efficiency and robustness of UP's power system network. This will also strengthen the resolve towards '24x7 Power for all', a joint initiative of the Central and State governments,” Anil Sardana, MD & CEO, ATL, said.

It will evacuate power from 3x660 MW Ghatampur TPS, once it is operational, owned by the Neyveli Uttar Pradesh Power (a joint venture of Neyveli Lignite Corporation and Uttar Pradesh Rajya Vidyut Utpadan Nigam).

The project includes 765KV S/C Ghatampur-Hapur transmission line of 411 km, which is one of the longest High Voltage Alternating Current (HVAC) transmission line in the country. It will connect the Ghatampur TPS (Central UP) to 765/400KV Hapur Substation (in Western UP).
